CONFIDENTIAL

3 OCT 1980

MEMORANDUM FOR: Chief, Policy and Plans Group

25X1   FROM: _____   __   25X1
                Policy and Plans Group

       SUBJECT: Resource Requirements for APEX Implementation [ ]   25X1

25X1   1.   The DD/PTOS and the DD/CA were asked for input to this
       requirement. [_____] stated that other than the four TSD and
       the three ISSG representatives who are provided for in the 1982
       APEX package, he does not foresee any additional requirements for
       APEX implementation. Regarding the requirement in the APEX
       government and industrial manuals for physical security accredita-
       tion inspections, he feels his current resources in the Physical
       Security Division will be able to conduct these accreditation
       inspections for both government and industry. Regarding the
       requirement in the manuals for annual inspection of these facili-
       ties, he believes that since it primarily is a document control
       inventory exercise, this perhaps falls more into the Special
25X1   Security Center arena. [ ]

           2.   I discussed this point with [_____], who concurred   25X1
       that for the annual inspections of government facilities, the
       SSC will conduct them for the 38 non-NFIB agencies involved.
       For the other U. S. Government facilities for which we have
       cognizance, the area security officers will be responsible for
       annual inspections. We also have [__] overseas stations and bases   25X1
       that will be designated APEX facilities. Both [_____] and   25X1
25X1   [_____] agree those will be done by OSSB on their normal
       inspection cycle. In those cases where the OSSB survey cycle
       exceeds one year, the designated APEX security officer for that
       overseas facility will conduct his own inspection to satisfy
       the annual requirement. He will be checked by the OSSB repre-
       sentative during the OSSB survey. Regarding the industrial
       contractor facilities for which the CIA is responsible, the
       annual inspections will be done by a combination of ISB per-
       sonnel, Office of Logistics, or DDS&T area security officers,
       as appropriate. The bottom line is that both [_____] and   25X1
25X1   [_____] believe that the Office of Security will not need
       to request additional personnel to conduct these physical
       security inspections either in 1981 or the out years. [ ]   25X1
                                                                     25X1
